

Dominic Saksa

Rochester Hills, MI | 248-805-6367 | saksadom@msu.edu | dmska.github.io

Computer Engineering student with hands-on programming, hardware design, and 3D modeling experience seeking software & embedded systems internships.

EDUCATION

Michigan State University - East Lansing, MI
Bachelor of Science, Computer Engineering
GPA - 3.02

August 2023 - expected May 2027

Yonsei University - Seoul, South Korea
Summer 2024
Summer Semester Abroad

TECHNICAL SKILLS

Programming:
C#, C++, CSS, HTML, JavaScript, Python, SPICE, Verilog

3D Modeling and Game Dev:
AutoCAD, Blender, CATIA V5, Unity

WORK EXPERIENCE

BI Worldwide - Junior Developer

June 2025 - Current

- Developed responsive HTML email campaigns in VS Code for Metro Detroit automotive dealerships, converting PDF templates into StrongMail-ready packages that informed clients about employee incentives.
- Applied responsive design best practices to ensure compatibility across major email clients and devices.
- Collaborated with account teams to align designs with brand guidelines and client objectives.

PROJECTS

ALU Project | Microprocessors and Digital Systems - Verilog and Vivado

- Programmed an 8-bit ALU CPU processor in Verilog using the Vivado IDE.
- Programmed four logic operator functions and selected the output using a multiplexer.

ATM State Machine | Computer Logic Fundamentals - Verilog and Vivado

- Designed and implemented a finite state machine (FSM) in Verilog to control a Spartan Bucks ATM system with checking, savings, deposit, withdrawal, transfer, and bill pay functionality.
- Interfaced with simulated cash dispenser and touch display modules, handling inputs/outputs including 8-bit account balances, transaction commands, and warning indicators (overflow, insufficient funds).
- Managed I/O constraints and timing using a 100 MHz clock and asynchronous reset for synchronous operation.

Football Calendar App | Intro to Engineering Design - MIT App Inventor

- Led a team of 4 to design a football calendar app, developing user flow and page hierarchy.
- Gained experience in collaborative project management and UI/UX design principles.

Pokemon Parallax Project- Independent Project

- Using a Parallax Headtracking technique to make a 2D screen appear 3D, players interact with a device by moving their head.
- Using a PS3 Eye camera for input, fed into AI-powered headtracking software, OpenTrack. This data is converted to a UDP and sent over the network. These packages are captured by the Unity engine and converted into 3d coordinate space. To achieve the view and orientation to be correct, an Off-Axis projection was used. This is similar to how we see through a window, where our perspective is projected onto that surface.

Disney Worldle - Independent Project

- Designed a daily web app game inspired by Wordle, focused on Disney Parks attractions.
- Developed game logic in JavaScript, styled the interface with CSS, and built frontend interaction with HTML.

The Spin Cycle - Independent Project

- Programmed a rhythm-based video game in Unity (C#), where players mix tracks using a washing machine turntable mechanic.
- Implemented beat-matching logic and interactive UI elements for an engaging user experience.

LEADERSHIP & COLLABORATION

IEEE | MSU Branch - Member

Talk of the Irish - Founder & Leader

- Established and led the Notre Dame Preparatory podcast team to amplify the student voice.

Triangle STEM Fraternity | MSU Chapter - FIRST Robotics Chair
